

For **Sunnova Medical Supplies**, I would build the admin dashboard as a serious e-commerce operations hub, not just a basic product editor.

The admin dashboard should manage **products, orders, quotes, customers, inventory, delivery, uploads, payments, reports, and store settings**.

1. Admin Overview Dashboard

This is the main screen after login.

I would include:

Key Metrics Cards

- Total sales
- Today's sales
- Pending orders
- Pending quote requests
- Low-stock products
- New customers
- Open account applications
- Orders out for delivery
- Abandoned carts
- Best-selling products

Quick Action Buttons

- Add Product
- Create Order
- View Quotes
- View Low Stock
- Upload Product Images
- Add Category
- Create Coupon

Recent Activity Feed

Show recent actions like:

- New order placed
- Quote submitted
- Product updated
- Customer registered
- Payment completed
- Inventory changed
- Admin changed order status

This helps the Sunnova team quickly understand what is happening in the business.

2. Product Management

This is one of the most important sections.

Product List

The admin should be able to view all products in a clean table with:

- Product image
- Product name
- SKU
- Category
- Brand
- Price
- Stock quantity
- Availability status
- Sale mode
- Featured status
- Last updated date
- Actions: View, Edit, Duplicate, Archive

Filters:

- Category
- Brand
- Stock status
- Sale mode
- Availability
- Featured products
- Draft/published/archived
- Search by name or SKU

Add/Edit Product

Product fields:

- Product name
- Slug
- SKU
- Brand
- Category
- Subcategory
- Product description
- Short description
- Product specifications
- Price
- Sale price
- Cost price, admin-only
- Inventory quantity
- Low-stock threshold
- Product images

- Product gallery
- Product variants
- SEO title
- SEO description
- Featured product toggle
- Published/draft toggle

Product Sale Modes

This is important for medical supplies.

I would support:

- Direct Purchase
- Quote Only
- Direct Purchase or Quote
- Account Only

Example:

Some normal supplies can be purchased directly, but bulk clinic orders or special-order supplies may need a quote.

Product Availability

Statuses:

- In Stock
- Low Stock
- Out of Stock
- Special Order
- Quote Required

3. Category Management

The admin should manage product categories easily.

Features:

- Add category
- Edit category
- Delete/archive category
- Parent and child categories
- Category image
- Category description
- SEO title
- SEO description
- Category slug
- Featured category toggle
- Sort order

Example categories:

- Exam Gloves
- Medical Disposables
- PPE
- Wound Care
- Aesthetic Supplies
- Syringes and Needles
- Clinic Essentials
- Infection Control
- Treatment Room Supplies

4. Order Management

This should be built for daily operations.

Order List

Show:

- Order number
- Customer name
- Business/practice name
- Order date
- Total amount
- Payment status
- Order status
- Delivery method
- Delivery date/status
- Actions

Filters:

- Pending
- Confirmed
- Processing
- Out for Delivery
- Delivered
- Cancelled
- Refunded
- Payment status
- Date range
- Customer
- Delivery area

Order Detail Page

Each order should show:

- Customer information

- Business name
- Contact information
- Delivery address
- Billing address
- Ordered products
- Quantity
- Price
- Subtotal
- Tax
- Delivery fee
- Total
- Payment status
- Order notes
- Internal admin notes
- Timeline/history
- Status update controls

Admin actions:

- Update order status
- Mark as paid
- Mark as processing
- Mark as out for delivery
- Mark as delivered
- Cancel order
- Issue refund placeholder
- Print packing slip
- Print invoice

- Send order update email
 - Add internal note
-

5. Quote Request Management

Because Sunnova has a strong **Request a Quote** CTA, this needs its own section.

Quote List

Show:

- Quote number
- Customer name
- Business/practice
- Products requested
- Date submitted
- Status
- Assigned admin
- Last updated
- Actions

Quote statuses:

- New
- Reviewing
- Responded
- Accepted
- Declined
- Converted to Order

Quote Detail Page

Show:

- Customer contact info

- Business/practice name
- Requested products
- Quantities
- Uploaded files
- Notes
- Preferred delivery date
- Internal notes
- Quote response history

Admin actions:

- Add quoted prices
- Add internal notes
- Upload quote document
- Email customer
- Mark as responded
- Convert quote to order
- Decline quote
- Assign quote to admin/team member

This is very important for B2B medical supply ordering.

6. Customer Management

The admin should have a full customer database.

Customer List

Show:

- Customer name
- Email
- Phone

- Business/practice name
- Customer type
- Account status
- Total orders
- Total spent
- Last order date
- Actions

Filters:

- Individual customer
- Business account
- Clinic
- Med spa
- Practice
- Verified account
- Pending approval

Customer Detail Page

Show:

- Profile information
- Business details
- Saved addresses
- Order history
- Quote history
- Total spending
- Notes
- Account status
- Uploaded account documents

Admin actions:

- Approve business account
 - Suspend account
 - Reset password link
 - Add internal note
 - View orders
 - View quotes
 - Create manual order
-

7. Open Account Applications

Since the homepage has **Open an Account**, I would create a dedicated admin workflow.

Features:

- View new account applications
- Business/practice name
- Contact person
- Email
- Phone
- Business type
- Delivery address
- Uploaded documents
- Notes
- Application status

Statuses:

- New
- Under Review
- Approved

- Rejected
- More Info Needed

Admin actions:

- Approve account
 - Reject application
 - Request more information
 - Convert to verified customer
 - Send email notification
-

8. Inventory Management

This is important for medical supplies.

Features:

- Inventory table by product/SKU
- Stock quantity
- Low-stock threshold
- Stock status
- Inventory adjustment history
- Manual stock adjustment
- Reason for adjustment
- Low-stock alerts
- Out-of-stock alerts

Inventory actions:

- Add stock
- Reduce stock
- Mark as damaged
- Mark as returned

- Correct stock count
- Export inventory report

Each inventory adjustment should be logged for accountability.

9. Delivery Management

Because Sunnova focuses on local Miami-Dade delivery, I would add a delivery operations section.

Features:

- Orders scheduled for delivery
- Delivery status
- Delivery address
- Customer phone
- Preferred delivery date
- Driver/admin notes
- Delivery timeline

Delivery statuses:

- Awaiting Scheduling
- Scheduled
- Preparing
- Out for Delivery
- Delivered
- Failed Delivery
- Rescheduled

Admin actions:

- Assign delivery date
- Add delivery notes

- Mark out for delivery
- Mark delivered
- Send delivery update email
- Print delivery manifest

This would make the local delivery promise easier to manage.

10. File and Image Manager

Since images should be stored in **DigitalOcean Spaces**, I would add an upload manager.

Features:

- Product image uploads
- Category image uploads
- Quote attachment uploads
- Account document uploads
- File preview
- File type validation
- File size validation
- CDN URL preview
- Delete unused files
- Copy image URL
- Organize by folder/type

Important:

- Do not store images on the VPS.
 - Store metadata in PostgreSQL.
 - Store actual files in DigitalOcean Spaces.
-

11. Coupons and Discounts

Useful for future promotions.

Features:

- Create coupon
- Edit coupon
- Disable coupon
- Fixed amount discount
- Percentage discount
- Free delivery discount
- Minimum order amount
- Usage limit
- Expiration date
- Customer-specific coupon
- Category/product-specific coupon

Examples:

- WELCOME10
- CLINICFIRST
- LOCALDELIVERY

12. Payments and Transactions

Admin should be able to view payment activity.

Features:

- Payment list
- Payment status
- Order number
- Customer
- Amount

- Payment provider
- Transaction ID
- Refund status
- Failed payment reason

Payment statuses:

- Pending
- Authorized
- Paid
- Failed
- Refunded
- Partially Refunded
- Cancelled

Admin actions:

- View payment details
- Retry payment notification
- Issue refund placeholder
- Mark manual payment received, if allowed

13. Reports and Analytics

I would add a reporting section so Sunnova can make business decisions.

Reports:

- Sales by date range
- Sales by category
- Sales by product
- Best-selling products
- Low-stock products

- Quote conversion rate
- Customer lifetime value
- Repeat customers
- Average order value
- Delivery volume
- Revenue by customer type
- Abandoned carts
- Products frequently viewed
- Products frequently added to cart

Export options:

- CSV
 - Excel
 - PDF summary
-

14. Search Management

For PostgreSQL full-text search, I would include basic search management.

Features:

- View popular searches
- View searches with no results
- Add search synonyms
- Promote products for certain keywords
- Track search conversion

Example:

If users search for “gloves,” admin can promote nitrile gloves first.

15. Reviews or Testimonials

Optional but useful.

Features:

- Manage testimonials
- Approve/reject reviews
- Feature selected testimonials on homepage
- Link testimonial to customer or business type

This can help support the “trusted locally” positioning.

16. Content Management

I would include a simple CMS area for editable website content.

Features:

- Homepage hero text
- Feature strip text
- Homepage CTA sections
- How It Works content
- Contact page content
- Delivery policy content
- Footer text
- SEO defaults
- Announcement bar

This prevents the owner from needing a developer for small copy changes.

17. Email Templates

Admin should manage transactional emails.

Templates:

- Welcome email

- Verify email
- Password reset
- Order confirmation
- Order status update
- Quote received
- Quote response
- Account application received
- Account approved
- Delivery update

Use Sunnova branding:

- Logo
 - Blue header
 - Orange/gold CTA
 - Clean white card layout
-

18. Store Settings

General settings:

- Store name
- Phone number
- Support email
- Business address
- Delivery areas
- Business hours
- Tax settings placeholder
- Payment settings
- Quote settings

- Minimum order amount
- Free delivery threshold
- Social links
- SEO defaults
- Maintenance mode

Delivery settings:

- Miami-Dade delivery enabled
- Delivery fee
- Same-week delivery messaging
- Allowed ZIP codes
- Delivery cutoff time
- Delivery days

19. Admin Users and Roles

I would add role-based admin access.

Roles:

Super Admin

Full access to everything.

Store Manager

Products, orders, customers, quotes, inventory.

Fulfillment Staff

Orders, delivery, inventory only.

Sales/Admin Staff

Quotes, customers, account applications.

Content Editor

CMS content, testimonials, SEO content only.

Support Staff

Customers, orders, quotes, but limited edit permissions.

Features:

- Invite admin user
 - Edit role
 - Disable admin user
 - View admin activity
 - Require secure password
-

20. Audit Logs

Every serious admin dashboard should have logs.

Track:

- Product created/updated/deleted
- Price changed
- Inventory changed
- Order status changed
- Quote converted to order
- Customer account approved
- Admin login
- File deleted
- Coupon created
- Settings changed

This protects the business from mistakes and makes operations easier to review.

21. Notifications

Admin notifications should show:

- New order
- New quote request
- New account application
- Low stock
- Failed payment
- Delivery issue
- Contact form submission
- Product out of stock

Notification types:

- In-dashboard notification
- Email notification
- Optional SMS later

22. Admin Dashboard UI Layout

I would design the admin dashboard with:

- Left sidebar navigation
- Top bar with search, notifications, and profile
- Clean card-based layout
- Tables with filters and bulk actions
- Sticky action bars on edit pages
- Slide-over drawers for quick views
- Modal confirmations for dangerous actions
- Status badges
- Breadcrumbs
- Responsive tablet support

Main sidebar items:

Dashboard
Products
Categories
Orders
Quotes
Customers
Account Applications
Inventory
Delivery
Coupons
Payments
Reports
Uploads
Content
Email Templates
Admin Users
Settings
Audit Logs

My recommended must-have admin features for version 1

For the first production version, I would prioritize:

1. Dashboard overview
2. Product management
3. Category management
4. Order management
5. Quote management

6. Customer management
7. Open account applications
8. Inventory management
9. Delivery management
10. Upload manager
11. Store settings
12. Admin roles
13. Audit logs

These would give Sunnova a strong operational backend from day one.
